5. The rejections to claim 21, 22, 45, 53, 60, and 66 under 35 U.S.C. 103(a) as being unpatentable over Wang (U.S. Patent Number 6,292,936) in view of Hillson et al. (U.S. Patent Number 6,094,644) and further in view of "The IR to VMx86 Translation Module Specification" by Chris Lattner, December 1999 is hereby withdrawn in view of applicant's arguments.
6. Claims 11-25, 34-47, 62-67 are provisionally rejected under the judicially created doctrine of obviousness- type double patenting as being unpatentable over claim 17 of copending Application No. 09/714,050.

Specification

7. The use of the trademarks "JAVA" and "JAVASCRIPT" have been noted in this application. They should be capitalized wherever they appear and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner, which might adversely affect their validity as trademarks.

Double Patenting

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 11, 34 and 62 are provisionally rejected under the judicially created doctrine of obviousness- type double patenting as being unpatentable over claim 17 of copending Application No. 09/714,050. Although the conflicting claims are not identical, they are not patentably distinct from each other because Claim 17 of the copending application No.

Art Unit: 2122

09/714,050 teaches the detecting, generating, interpreting, executing, and accessing one or more program objects steps, as taught in Claim 11 of the application. The current application teaches an intermediate language (platform independent language) whereas the copending application No. 09/714,050 specifies generating a platform-independent programming language (which can be seen as an intermediate language). Neither change makes a difference in the scope of the claim. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 12-25 depend on claim 11 and are rejected.

Claims 35-47 depend on claim 34 and are rejected.

Claims 63-67 depend on claim 62 and are rejected.

Allowable Subject Matter

9. the cited prior arts taken alone or in combination fail to disclose, in combination with other claimed limitations, wherein the first process is implemented in a platform-independent programming language, generating an intermediate representation of the one or more script language instructions. wherein the intermediate representation of the one or more script language instructions is different from the script language as recited in independent claims 11, 34 and 62 and as pointed out on pp. 5-6 of the remark filed on 4/23/2004; the cited prior arts taken alone or in combination fail to disclose, in combination with other claimed limitations, if said examining determines the current tag of the markup language document identifies the portion of the markup language document as comprising script language instructions, passing execution to an interpreter engine implemented in the platform-independent programming language as recited in

independent claim 26 and as pointed out on p. 8 of the remark filed on 4/23/2004; the cited prior arts taken alone or in combination fail to disclose, in combination with other claimed limitations, wherein the Web browser is executable by the processor to: process a markup language document comprising a script comprising one or more script language instructions; detect the script in the markup language document; and provide the script to the interpreter engine as recited in independent claim 48 and as pointed out on p. 8 of the remark filed on 4/23/2004; the cited prior arts taken alone or in combination fail to disclose, in combination with other claimed limitations, a Web browser executable within the Java Virtual Machine to: detect one or more script language instructions in document, and a markup language pass execution to the interpreter engine in response to said detecting; wherein the interpreter engine is executable within the device to; generate an intermediate representation of the detected one or more script language instructions as recited in independent claim 56 and as pointed out on p. 9 of the remark filed on 4/23/2004.
